The Texas Woman's University forbids, under any circumstances, the unauthorized reproduction of software or use of illegally obtained software. Using University equipment to make illegal copies of software is prohibited. University employees and students who violate this policy are subject to disciplinary action. Individuals who violate U.S. copyright law and software licensing agreements also may be subject to criminal or civil action by the owner of the copyright.

The Texas Woman's University, along with many other colleges and universities, supports the following statement from the EDUCOM Code, "Using Software," distributed by EDUCOM, a nonprofit consortium of colleges and universities:

"Respect for intellectual labor and creativity is vital to academic discourse and enterprise. This principle applies to works of all authors and publishers in all media. It encompasses respect for the right to acknowledgement, right to privacy, and right to determine the form, manner, and terms of publication and distribution.

Because electronic information is volatile and easily reproduced, respect for the work and personal expression of others is especially critical in computer environments. Violations of authorial integrity, including plagiarism, invasion of privacy, unauthorized access, and trade secret and copyright violations, may be grounds for sanctions against members of the academic community."

Software programs are protected by Section 117 of the 1976 Copyright Act. Most Texas Woman's University software is protected by federal copyright laws. Educational institutions are not exempt from these laws. Software is also protected by the license agreement between supplier and purchaser. Software provided by Texas Woman's University can only be used on the computer equipment specified in the software license. It is against University policy to copy or reproduce any licensed software on University computing equipment, except as expressly permitted by the software license.
