

Connecting to TWU's wireless network using Windows 7

Texas Woman's University faculty, staff, and students have the option to use wireless network service on campus. Wireless network service enables a wireless enabled computer or devices such as iPhone, Ipad Touch and Android devices to connect to the TWU campus network and internet without plugging into a network jack.

1. Left-click on the wireless network icon on the bottom right corner of the screen.

2. Select **twunet** (left-click).

3. The wireless connections manager will now show as "Connected."
